Git vs. GitHub

- Git is a version control system that lets you manage and keep track of your source code history.
- GitHub is a cloud-based hosting service that lets you manage Git repositories. If you have open-source projects that use Git, then GitHub is designed to help you better manage them.

Time for Open Source Contribution

- git clone the project
- Create a new branch with naming pattern (feat/your-name-changes)
- Create a new file your-name.txt
- git add, git commit, git push origin branch-name
- Create a PR (Pull Request)
- Get it reviewed & merged from Anant
